

Rubber tracks manufactured  
under Minitop private label

What makes Minitop  
so special?

The combination of  
industrial expertise  
&  
experience in the field

Your partner specialising  
in rubber tracks

**MIND  
THE TRACK**

Design - Manufacturing - Storage - Distribution

With over 27 years of experience in the international market, Minitop rubber tracks have become a benchmark for construction dealers.

Our passion for construction machinery and a well done job drives every member of our team.

As specialists in the rubber track industry, we are constantly striving to improve and innovate our rubber tracks to keep up with advances in machine technology.

Our specialisation and experience make Minitop a true European answer in the supply of rubber tracks.

# Minitop: The rubber track specialist

For a High Quality Service and Product

## Design

Experience is synonymous of quality, and quality is an essential component in the development of interchangeable rubber tracks with OEM. The synergy among the technical departments, the particular attention paid to the new models of tracked vehicles put on the market, are the stimulus for integrating new solutions beneficial for ever more efficient rubber tracks.

## Production

High-quality components and modern production lines are the key to ensure the production of high-quality and reliable reinforced rubber tracks. We choose to follow the development of rubber track production together with technology advances. That's how, we ensure that we supply state-of-the-art tracks for mini-excavators.

## Quality control

Quality control during the various stages of production is the guarantee of a quality finished product, ready to be distributed on the market. Each rubber track is identified by a unique serial number of the production batch, this traceability is the only guarantee that the production and marketing processes are known at all times.

## Warehouse

The rubber track warehouse is structured to accommodate thousands of rubber tracks ready to reach any destination. Each location is marked to speed up the picking and packing of the ordered rubber track size.

## Permanent development

The quality of the rubber tracks is constantly monitored and shared with the production plant through feedback from our dealers. A similar procedure is applied to every operational process within Minitop to improve service to dealers.

## Transport

The logistics and shipping of the rubber tracks are handled by forwarding agents whose priority is to deliver the goods on time. Minitop relies on a number of partners who guarantee the delivery of the tracks in Europe within 24 to 72 hours through their extensive distribution network.

## High quality rubber tracks: our strong points

### 1- Continuous steel cables

Steel cables have been developed to increase the strength and endurance of rubber tracks. The use of continuous steel cables increases the strength of the tracks by 40% over time, which considerably reduces the maintenance costs of your machines.

### 2- High quality raw material

MINITOP has always been committed to using only premium quality raw material to ensure an excellent product.

### 3- Rubber compound

Only the right percentage composition of the rubber type, added with special chemical components and implemented by correct vulcanisation, can guarantee quality products.

### 4- Product traceability

Through the serial number on each rubber track, we guarantee product traceability.

### 5- Identification

Our rubber tracks are easily recognisable by the Minitop logo.
